

FIGURE 5. FOURTH GRADE ENROLLMENT AND CLASS SIZE IN URBAN PRIVATE VOUCHER SCHOOLS, 2002

*Notes:* Based on administrative data for 2002. The solid line describes the relationship between enrollment and class size that would exist if the class size rule (equation (30) in the text) were applied mechanically. The circles plot actual enrollment cell means of fourth grade class size. Only data for schools with fourth grade enrollments below 180 are plotted; this excludes less than 2 percent of all schools.
